Cultivating Continuity

Shared Ownership and Co-Creation in Parks and Open Spaces at YZD Hangar District

C4 Cross Campus Capstone Classroom

PROBLEM

Current engagement models in large scale developments often collect resident input but lack a system to carry that feedback into later phases, adapt to changing communities, or clearly show how input leads to action.

NEED

A transparent mechanism is needed to ensure community voice continues beyond early engagement tools like surveys and workshops. Without it, decisions rely more on developer or municipal assumptions than real community priorities.

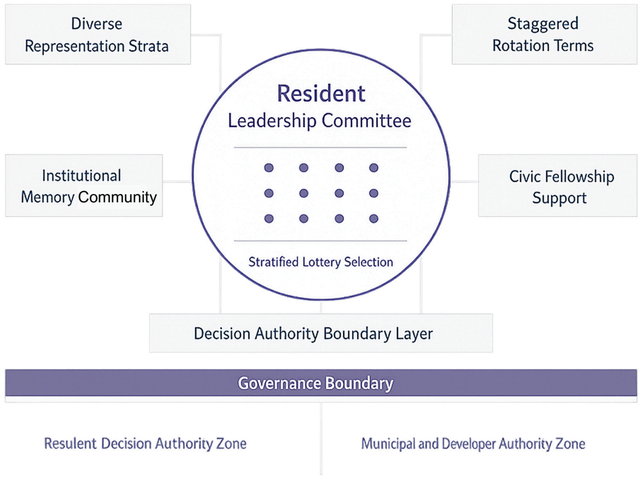

RESPONSE

A layered hybrid participation system combining a resident lottery governance model, a three pillar incentive structure and a visible co creation feedback loop that tracks how ideas move from input to action.

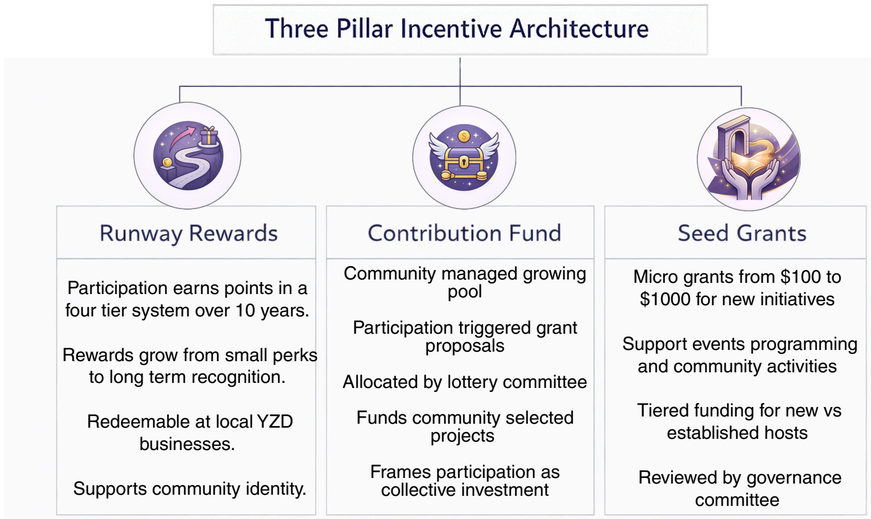

SDG CONNECTION

The project supports SDG 11 through participatory governance and stewardship of public spaces, and SDG 17 through partnerships with residents, local businesses, Northcrest, and Indigenous partners, though impact remains limited by site scale and evolving Indigenous co creation depth.

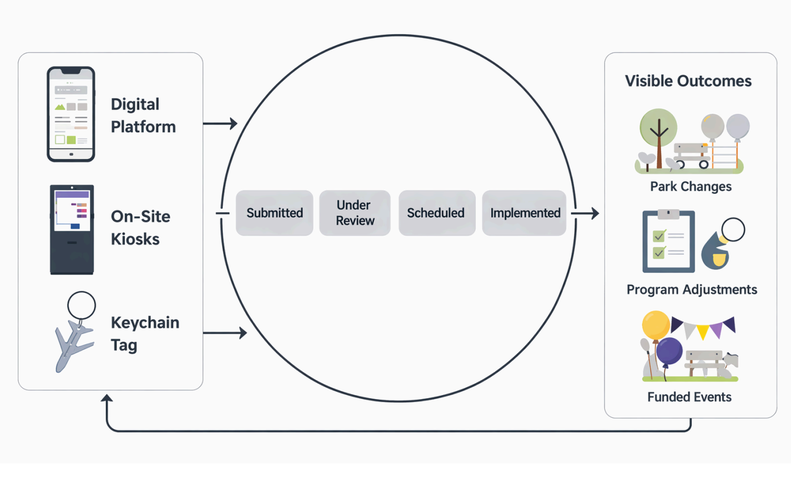

Governance Structure

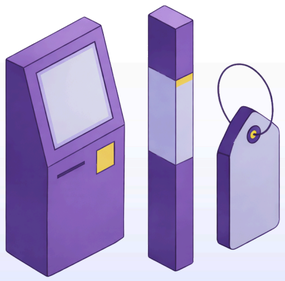

Reward System

Feedback Loop

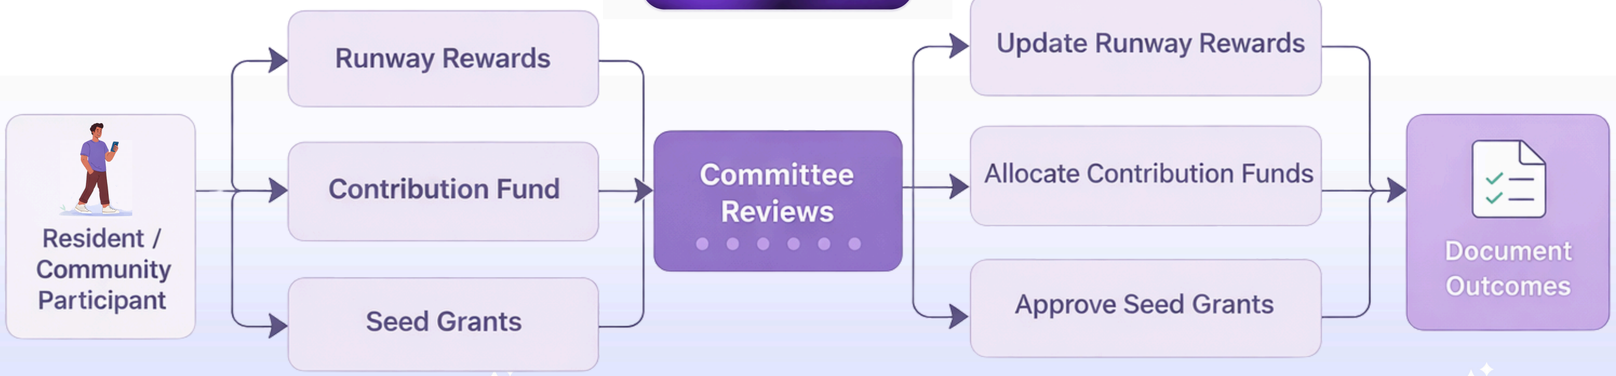

Hybrid Touch Kiosks

Building engagement and feedback is held by the kiosks and keychains we can increase engagement and feedback from the community
